

PROFILE:

Kansas Nursing Facility Goes Green and CLEAN! 196 bed care facility adopts Advanced Ozone Laundry System to save money and achieve Advanced Disinfection.

Located in Wichita, Kansas, Lake Point Retirement and Rehabilitation has implemented the Eco-Wash Laundry Ozone System. This system helps:

- Cut hot water use by up to 85%
- Reduce laundry costs up to 50%
- Advanced Disinfection
- Improve cleaning & quality of laundered product
- Superior Odor removal
- Cut overall water use
- Reduce chemical use and environmental impact
- Extend linen life as much as 20%
- Reduced Carbon and Water footprint

Ozone is highly effective even against '*super bugs*' like MRSA, cDiff, HIV, H1N1, Asper Ni, and many others. Disinfection levels are far superior to traditional laundry methods.

"We really believe in it! I had been looking at Ozone for a couple of years. We're glad to have the EcoWash system installed. Now that we understand the technology we wouldn't do without it." said Warner Harrison, CEO, who operates several properties in the Mid-West.

Processing about 780,000 pounds of laundry per year at this location the savings really add up. Installed in August 2010, this system is expected to achieve full Payback (ROI) in only 18 months— *AMAZING!* After that the savings continue to accrue year after year. Benefits include reduced operating costs, improved disinfection and cleaner, brighter & fresher laundry.

Warner Harrison, CEO

"The Smart Way to do Laundry!"™

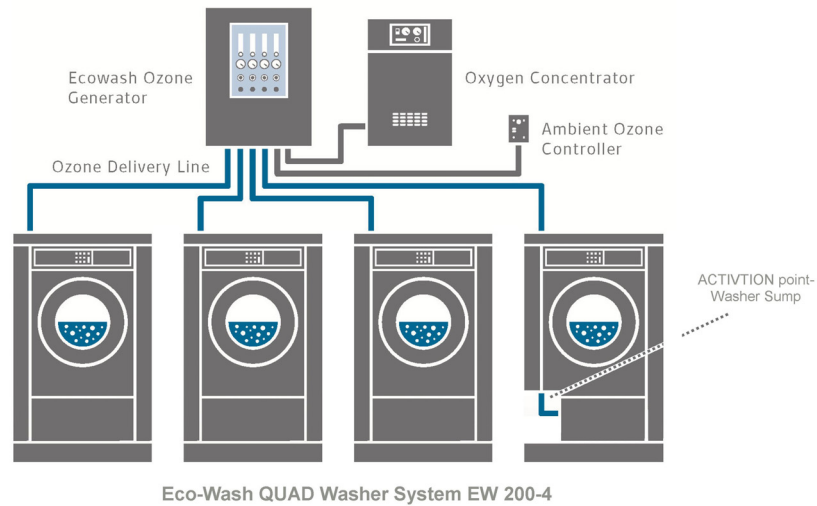

Wall mounting offers convenient & minimal footprint.

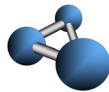

Four washers ranging in size from 40 to 60lbs, give the facility the ability to process nearly 210 lbs of laundry at once. Configuration was simple- one Quad Cell unit was installed handling the four washers independently or simultaneously. The ozone system continuously monitors the washers and automatically engages or hibernates until needed.

Operation is fully automatic. Staff who work the laundry simply add the laundry to the machine and activate the desired laundry program as they always have. No inputs on the Ozone system are required.

PROFILE:

ONE Quad Cell unit was configured for the washers. Each washer is completely independent of the others. The system automatically monitors each individual washer for operation and comes online automatically or hibernates until needed.
