Wisconsin Jail Adopts State of the Art Ozone Laundry System! Ozone saves the county \$3,000 per month and brings Advanced Disinfection to their laundry!

Two Waukesha County Sheriff's Department correctional facilities have installed the Eco-Wash Laundry Ozone System to cut laundry facility costs by up to 50% and bring advanced disinfection to their laundered textiles. The system effectively treats even the most severe microbes like MRSA, cDiff and HIV. Even drug resistant strains like TB are inactivated by the Eco-Wash system.

Waukesha County Correctional Facility

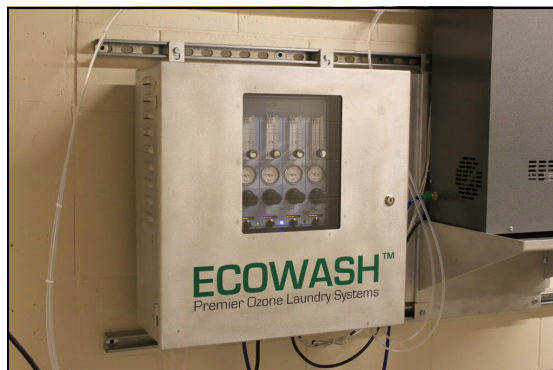

The Waukesha County Jail is a 469-bed facility which is a combination of direct supervision and remote supervision housing pods. The County Jail is a maximum-security facility which houses male and female, pre-trial and sentenced offenders.

The Sheriff's Department also operates the Huber Law or work release facility. Inmates confined at the Huber Facility are allowed out of the facility for the purpose of work, education, child or elder care and treatment purposes.

Jim Elsbury, County Facility Supervisor said "we installed 2 of your Ozone Machines in our Jail and Huber Buildings. Since the installation of these units, our gas usage has dropped by 3100 -3500 therms per month at our Jail. We had another savings of \$5,000.00 related to this as well. The existing Temperature controller for the Domestic Hot Water failed; without the need to supply the higher temp water to the Laundry, we were able to remove the valve completely (unplanned savings). We chose your company based on your Product, the start up cost and the ROI,

The units have worked well, we have not had any serious issues with either of them. We truly appreciated the time your company spent learning our operation and the training that followed. Your staff did an excellent job communicating with us throughout the install. Our Jail staff has been pleased with the results as well. While the product has only been in place 5 months, it is performing exactly the way you said it would. Thank you again for all of your assistance in selecting what looks to be the best product for this purpose."

"The Smart Way to do Laundry!"™

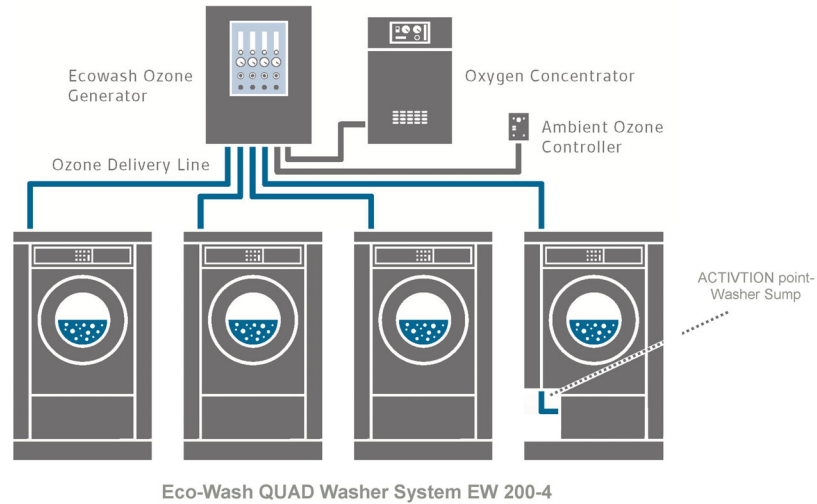

Wall mounting offers convenient & minimal footprint.

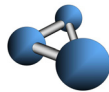

An Eco-Wash EW 200-1 was installed at the Huber Center and an EW 200-4 Quad system was installed at the Jail facility handling all four washers simultaneously or independently. The ozone system continuously monitors the washers and automatically engages when one or more are activated or hibernates until needed.

Operation is fully automatic. Inmates who work the laundry simply add the laundry to the machine and activate the desired laundry program as they always have. No inputs on the Ozone system are required.

PROFILE:

ONE Quad Cell unit was configured for the washers in the Jail facility. Each washer is completely independent of the others. The system automatically monitors each individual washer for operation and comes online automatically or hibernates until needed.
